

INFRASTRUCTURE, INFORMATION SECURITY & BUSINESS CONTINUITY PLANNING WORKSHOPS (2018 CALENDAR)

Information security (info-sec) is a set of strategies for managing the processes, tools and policies necessary to prevent, detect, document and counter threats to digital and non-digital information.

Organizations are seeking to adapt the best technology so as to provide the best link in service delivery and security of the processes and procedures at the workplaces. This range from deploying ERPs, EDMS, CRMs to ensuring they function seamlessly

This is a workshop on Infrastructure; Information Security & Business Continuity Planning Workshop Information security management is a key governance responsibility

Disaster recovery (DR) refers to having the ability to restore the data and applications that run your business should your data center, servers, or other infrastructure get damaged or destroyed. One important DR consideration is how quickly data and applications can be recovered and restored.

Business continuity (BC) planning refers to a strategy that lets a business operate with minimal or no downtime or service outage.
